

Aluminium label

## Aluminium Label

Due to the mouldability and the low material thickness of 0.3 mm, the newly developed aluminium labels can be stuck very easily onto curved surfaces like a foil sticker, e.g. beverage bottles, vases, perfumes, tubes (bicycle steering head/head tube, prams, sunshades). The aluminium label adapts seamlessly to the object it is stuck to.

As with the [Aluminium 3D](#), fine embossed details are also possible with the Aluminium Label. Ask for samples.

- **Produced climate-neutrally in our factory in Mindelheim**

### TECHNICAL DATA

Material	Aluminium
Material thickness	0,3 mm
Surface finishing	<a href="#">Micro-printing</a> , Textured lacquer, <a href="#">Special-effect inks</a> , <a href="#">Embossing</a>
Printmethod	<a href="#">Digital printing</a> , <a href="#">Screen printing</a> (Screen printing: guide value for colour distance Delta E=2.5)
Fixation	<a href="#">Self-adhesive</a>
Resistance to	Alcohol, chemical cleaning agents, ultraviolet radiation, adverse weather, fuel, grease
Product additional options	<a href="#">Identification systems</a> with <a href="#">coding and numbering</a> , <a href="#">RFID-/NFC-solutions</a>
