

**RATHGEBER**

Partner in  
climate protection

**Climate neutral labelling solutions**  
for marketing and technology

# First-class, versatile and climate-neutral

3D logos, emblems, lettering, RFID/NFC, product personalisation, metallic, acrylic or plastic plates, panels, labels, films: the RATHGEBER Group has been producing promotional and technical labelling solutions for companies in the industrial, retail and service sectors for over 70 years and is now owned and managed by the third generation of the family. All products are produced on a climate neutral basis.

## All of our products are climate neutral

---

Climate neutral means: all carbon emissions are calculated and offset in accordance with the international standards set by the Greenhouse Gas Protocol.

### 1. Calculating carbon emissions

We document all carbon emissions caused during operation and along our products' entire supply chain, including all materials used.

### 2. Avoiding and reducing carbon emissions

We keep our emissions as low as possible, for example through heat recovery, self-contained water circuits in cooling and washing systems, photovoltaic systems, state-of-the-art refrigeration technology, condenser systems for transport optimisation in disposal, UV technology without solvents, computer-to-screen without printing films, e-mobility, bicycle leasing, carpooling, etc.

### 3. Offsetting carbon emissions

We support an internationally recognised carbon offset project in Uganda to offset our unavoidable emissions.

### 4. Label "climate neutral"

Using our ID, you can track at [www.climatepartner.com](http://www.climatepartner.com) how and where we have compensated for our carbon emissions – certified by TÜV Austria, the Austrian technical inspection authority.

# How does a carbon offset project work?

Carbon offset projects demonstrably save greenhouse gas emissions through activities like reforestation or renewable energy. Independent organizations such as TÜV, SGS, or PwC verify the exact volume saved. The project operator can finance the project through the sale of certified emissions reductions.

Emissions saved in Uganda:  
**500 000 tons per year**

Further information: [www.climate-project.com/1041](http://www.climate-project.com/1041)

## Our carbon offset project **Clean cookstoves in Uganda**

This project saves carbon emissions by distributing improved cookstoves to rural households in Uganda and creates various benefits for local people and ecosystems. Families save firewood and especially women and children are exposed to considerably fewer harmful substances during cooking, which significantly reduces the health problems caused by respiratory diseases.

# Why climate neutral products by RATHGEBER?

---

- You contribute to the fight against global warming and you support a climate neutral world economy.
- You support recognized carbon offset projects.
- You enable the consumer to choose the climate neutral alternative.
- No additional costs: we pay for the carbon offset.
- Full transparency: The carbon offset can be tracked via ID – certified by TÜV Austria, the Austrian technical inspection authority.
